Maliha Tariq

Software Engineer

malihatariqqq@gmail.com | +971 58 123 3911 | UAE Golden Visa | https://maliha-folio.vercel.app/ | linkedin.com/in/malihatariqq

SUMMARY

Software Engineering graduate focused on full-stack web development (TypeScript, React/SvelteKit, Django, PostgreSQL). Co-built a production event platform adopted by Monash clubs and societies, and won Best Final Year Project for ML research on speech impairment. Internship experience across frontend development, backend automation and UAT in a client-facing agile team.

QUALIFICATIONS

Bachelor of Software Engineering (Honours) 06/2026

Monash University Malaysia | CGPA: 3.7 | Best Final Year Project Award (2026)

RELEVANT EXPERIENCE

IT Project Management Intern, Fireworks Solutions International 11/2024 – 02/2025

- Wrote backend automation scripts to replace repetitive manual data-handling tasks for the delivery team.
- Built responsive web interfaces from high-fidelity Figma prototypes, working directly with the design lead.
- Wrote and ran UAT scripts against acceptance criteria before client releases.
- Supported sprint planning and milestone tracking in a client-facing agile team, flagging blockers early as requirements changed.

PROJECTS

Astone: E-Commerce Platform **07/2024**

React.js · Django · PostgreSQL · Figma · Vercel

- Built a full-stack store with a React front end and a Django REST backend on PostgreSQL, handling product catalogue, user accounts and cart/checkout.

SEMS2: Student Experience Management System **10/2025**

SvelteKit · TypeScript · Tailwind · Supabase (PostgreSQL, Auth, Realtime)

- Built and shipped, as one of 3 members, a role-based platform (Student / Organiser / Admin) adopted by Monash clubs and societies to run events end-to-end, from registration to feedback to certificates.
- Restricted sign-in to institutional Google accounts via OAuth, and added real-time updates and CSV/XLS exports for admin reporting.
- Set up automated unit and end-to-end tests (Vitest, Playwright) run before each release.

NutriTrack: Clinical Nutrition Insights App (Android) **06/2025**

Kotlin · Jetpack Compose · Room DB · Retrofit · Google Gemini (GenAI)

- Built an Android app using MVVM architecture with Room DB for persistent, normalised data, integrating the FruityVice API via Retrofit for live nutrition data.
- Integrated Google Gemini (GenAI) to turn raw clinical scores into contextual, personalised guidance - shipped LLM output directly into a user-facing feature.
- Implemented multi-user authentication and a secure admin analytics dashboard (HEIFA scoring).

Phoneme-Informed Speech Impairment Classifier (Final Year Project) **06/2026**

Python · wav2vec2 · PyTorch · librosa · TORGO Dataset

- Engineered a feature-injection pipeline adding pitch and MFCC acoustic features into a pretrained wav2vec2 model, cutting Phoneme Error Rate by 72% (0.527 → 0.147) across 15 dysarthric speakers.
- Validated results with a Wilcoxon signed-rank test ($p = 3.05 \times 10^{-5}$) and a 5-configuration ablation study.

TECHNICAL SKILLS

Languages: TypeScript/JavaScript, Python, Kotlin

Frontend: React.js, SvelteKit, Tailwind CSS, Jetpack Compose, HTML & CSS, Figma

Backend / APIs / Data: Django, Retrofit, REST API integration, PostgreSQL (Supabase), MySQL, Oracle

Cloud / Hosting: Vercel, Supabase

Tools & Testing: GitHub, Vitest, Playwright, Agile/Scrum, Trello, Jira

ML / AI: PyTorch, wav2vec2, librosa, Google Gemini API integration & evaluation
